

ABSTRACT OF THE DISCLOSURE

APPARATUS AND METHOD OF BOOKMARKING A SECTION OF A WEB PAGE

5

A method and apparatus for bookmarking a section of a Web page are provided. When a Web page is being bookmarked, if the user so chooses, the user may store in conjunction with the URL of the page the size of the window within which the page is displayed, the location of both the horizontal and vertical scroll boxes in the window and the font attributes used to display the page. This allows the section of the page that was displayed when the page was bookmarked to be displayed whenever the bookmarked Web page is re-accessed.
